Synopsis :

Review 'Currey's book admirably accomplishes the goal of making the vast field of research into bone mechanics and adaptations accessible to serious investigators in other disciplines. . . . It conveys the contagious enthusiasm of a mentor guiding his reader into the heart of his specialty.'--Mary W. Marzke, American Journal of Human Biology/A remarkable summary of bone structure and mechanics, full of interesting insights and creative thoughts to spark dozens of dissertations. I am glad to have it on my shelf.'--R. Bruce Martin, Journal of Biomechanics Read more From the Inside Flap 'Written by a highly respected biologist, this work is unique in that it integrates a comprehensive treatment of skeletal biology at the tissue and organismal levels with principles of evolutionary biology, zoology, and animal locomotion. It is written in a uniquely interesting way that is understandable to both experts and relative novices in the field.'--David D. Burr, Indiana University School of Medicine 'This is a highly readable book with excellent illustrations. It will be required reading for all those interested in the mechanical testing of mineralized tissues or in a biological understanding of bone adaptation to mechanical loading. The author's evaluations of the topics that form the leading edge of bone research are remarkably thoughtful, well reasoned, and nicely documented.'--Steve Cowin, City University of New York --This text refers to an out of print or unavailable edition of this title.
